Title: Active Directory Domain Setup and Network Services Configuration for
“musicstream.local” (Windows Server 2019)

1. Create a new Active Directory domain called 'musicstream.local' for a fictional music streaming startup, and add five user accounts representing employees from different departments (e.g., admin, marketing, tech, support, HR).

⇒ Step 1: Install Active Directory Domain Services (AD DS)

Open Server Manager.

Click Add Roles and Features.

Select Role-based installation.

Choose your server.

Install:

Active Directory Domain Services

Click Install.

Step 2: Promote Server to Domain Controller

After installation, click Promote this server to a domaincontroller.

Select Add a new forest.

Enter domain name:

musicstream.local

Set DSRM password.

Complete wizard and restart server.

Step 3: Create 5 User Accounts

Open:

Active Directory Users and Computers

Go to: musicstream.local → Users → New → User

Create the following users:

Admin User: admin_user

Marketing: marketing_user

Tech: tech_user

Support: support_user

HR: hr_user

Set passwords and enable accounts.

**2. Configure DNS and DHCP services on your Windows Server so that all devices in the 'musicstream.local' network automatically receive IP addresses and can resolve domain names within the network.

Hint: Use the Server Manager to install and configure both roles, and test by connecting a client VM or device.**

⇒ Step 1: DNS Configuration

DNS is automatically installed with AD DS, but verify:

Open Server Manager → Tools → DNS

Check forward lookup zone:

musicstream.local

Ensure records are created automatically.

Step 2: Install DHCP Role

Server Manager → Add Roles and Features

Install:

Dynamic Host Configuration Protocol

Complete installation.

Step 3: Configure DHCP Scope

Open DHCP Console

Create new scope:

Range: 192.168.1.100 – 192.168.1.200

Subnet mask: 255.255.255.0

Configure options:

Default Gateway: 192.168.1.1

DNS Server: Server IP

Domain: musicstream.local

Activate scope.

Result:

All client devices will:

Get automatic IP addresses

Resolve domain names via DNS

3. Set up a shared folder named 'PlaylistShares' on your server, give read/write access only to the 'marketing' and 'tech' users, and map it as a network drive on their accounts.

⇒ Step 1: Create Folder

Create folder: C:\PlaylistShares

Step 2: Share Folder

Right-click → Properties → Sharing → Advanced Sharing

Share name: PlaylistShares

Permissions:

Remove Everyone

Add:

marketing_user → Read/Write

tech_user → Read/Write

Step 3: NTFS Permissions

Go to Security tab

Allow:

Marketing → Modify

Tech → Modify

Step 4: Map Network Drive

On client machines:

Open File Explorer → This PC → Map Network Drive
Path:

<\\musicstream.local\\PlaylistShares>

4. Create a Group Policy Object (GPO) that enforces password complexity and disables USB storage for all users except the 'admin' account.

⇒ Open:

Group Policy Management

Step 1: Create GPO

Open Group Policy Management

Create new GPO: SecurityPolicy_MusicStream

Step 2: Password Complexity

Path:

Computer Configuration → Policies → Windows Settings → Security Settings
→ Account Policies

Enable:

Password must meet complexity requirements

Minimum password length (e.g., 8+)

Step 3: Disable USB Storage

Path:

Computer Configuration → Administrative Templates → System
→ Removable Storage Access

Enable:

“All Removable Storage classes: Deny all access”

Step 4: Exclude Admin Account

Create Security Filtering

Remove admin_user

Apply GPO to all other users only

**5. Write a step-by-step guide (max 1 page) explaining how to restore a deleted user account from backup in your 'musicstream.local' domain, including the tools and commands you would use.

Hint: Mention Windows Server Backup and Active Directory Users and Computers.**

⇒ Step 1: Open Backup Tool

Go to Server Manager → Tools → Windows Server Backup

Step 2: Start Recovery Wizard

Select Recover

Choose backup location

Select date before user deletion

Step 3: Restore Active Directory Data

Choose:

System State Recovery

Restore to:

Original location

Step 4: Restart in Directory Services Restore Mode (DSRM)

Reboot server

Press F8 → Select DSRM

Step 5: Restore Deleted User

Open ADUC

Navigate:

musicstream.local → Users

Recreate or restore user from backup

Step 6: Verify

Check user login

Ensure group membership restored

Test access permissions
