Administrative Remote System Assignment

Task 1: Connect to remote server and create directory

Connect using SSH:

ssh user@192.168.1.100

On the remote server, run:

mkdir -p ~/music_downloads

exit

Replace user@192.168.1.100 with your actual remote username and IP.

Task 2: Transfer playlist.txt using SCP

On your local machine:

scp playlist.txt user@192.168.1.100:~/music_downloads/

Verify on the remote server:

ssh user@192.168.1.100 'ls -l ~/music_downloads/'

Task 3: Set up passwordless SSH login

On your local machine, generate a key without a passphrase:

ssh-keygen -t ed25519 -N ""

Copy the public key to the remote server:

ssh-copy-id user@192.168.1.100

Test passwordless login:

ssh user@192.168.1.100

It should not ask for the remote account password.

Task 4: Create remote_nginx_check.sh

On your local machine:

nano remote_nginx_check.sh

Paste:

#!/bin/bash

ssh user@192.168.1.100 \

'sudo systemctl restart nginx && sudo systemctl status nginx --no-pager'

Save, then run:

chmod +x remote_nginx_check.sh

./remote_nginx_check.sh

Note: The remote user must have permission to restart Nginx using sudo. Nginx must also be installed on the remote server.

Task 5: Fix the incorrect SSH command

Incorrect:

ssh user@192.168.1.100:/home/user/music_downloads

Correct SSH connection:

ssh user@192.168.1.100

To connect and list the directory remotely:

ssh user@192.168.1.100 'ls -l /home/user/music_downloads'
