

Name: Diya Shah

Subject: WSUS installation and setup

1. Install and configure Windows Server Update Services (WSUS) on a Windows Server VM, ensuring the WSUS role is added and the initial setup wizard is completed.

⇒ Step 1: Add WSUS Role

Open Server Manager

Click Manage → Add Roles and Features

Click Next (Before You Begin)

Select:

Role-based or feature-based installation

Click Next

Select your server

In Roles list, check:

Windows Server Update Services

A popup will open → click Add Features

Click Next

Step 2: Select WSUS Services

Tick:

WSUS Services

Database (WID Database) (*default recommended*)

WSUS Management Console

Click Next

Step 3: Select Content Location

Choose folder:

Example: D:\WSUS or C:\WSUS

Click Next

Step 4: Install Role

Click Install

Wait for completion

Do NOT close Server Manager

Step 5: Post-Installation Configuration

Click notification flag in Server Manager

Click:

“Launch Post-Installation tasks”

Wait until it finishes.

Step 6: WSUS Configuration Wizard

Open:

Tools → Windows Server Update Services

Then:
Configuration Steps:
Choose:
Synchronize from Microsoft Update
Click Next
Set Proxy (if none → Next)
Choose languages:
English (or as needed)
Choose Products:
Windows 10 / Windows 11 / Windows Server 2019
Choose Classifications:
Security Updates

Critical Updates

Click Next
Click Start Synchronization

2. Create a group of at least two Windows client machines (physical or virtual), and configure their Windows Update settings via Group Policy to point to your WSUS server for updates.

⇒ Step 1: Open Group Policy Management

On Server:

Press Win + R

Type:

gpmc.msc

Enter

Step 2: Create New GPO

Right click Group Policy Objects

Click New

Name:

WSUS Policy

Step 3: Edit Policy

Right click → Edit

Go to:

⇒ Computer Configuration →
Administrative Templates →
Windows Components →
Windows Update

Step 4: Configure WSUS Settings

1. Set WSUS Server

Open:

Specify intranet Microsoft update service location

Enable it:
Fill:
`http://<WSUS-SERVER-IP>:8530`
Example:
`http://192.168.1.10:8530`

2. Enable Automatic Updates
Open:
Configure Automatic Updates
Enable:
Option: 4 - Auto download and schedule install

Step 5: Link GPO to Client OU
Open Active Directory Users and Computers
Create OU:
ClientMachines
Move client PCs into this OU
Link WSUS Policy to this OU

Step 6: Apply Policy on Client
On client machine:
Run:
`gpupdate /force`

3. On your WSUS server, approve a specific Windows security update for installation on your client machines and initiate the update process.

⇒ Step 1: Open WSUS Console
Go to:
Tools → Windows Server Update Services

Step 2: Sync Updates
Click Synchronization
Wait for updates list

Step 3: Approve Update
Go to:
Updates → All Updates
Filter:
Status: Needed
Select one:
Example: Security Update for Windows Server
Right-click → Approve

Step 4: Choose Target Group

Select:
All Computers or create group like TestGroup
Click:
Approved for Install

Step 5: Client Update Process

On client:
Run:
wuauctl /detectnow
OR:
usoclient startscan
Then:
gpupdate /force
Check:
Settings → Windows Update → Check for updates

- 4. Generate a WSUS patch report that lists all client machines and shows which ones successfully installed the approved update, then export the report as a CSV or screenshot and save it for review.

Hint: Use the WSUS console's 'Reports' section to create and export the update status report.**

⇒ Step 1: Open Reports
WSUS Console:
Reports → Update Status Summary

Step 2: Select Report Type

Choose:
Update Status Summary
OR
Computer Detailed Status

Step 3: Generate Report

Click:
Run Report

Step 4: Export Report

You have 2 options:
Option A: Export as CSV
Click Export
Select:
CSV format
Save file
